

Real-Time Vehicle Monitoring for Less

As close as it gets to being there

In-vehicle monitoring from our partner Geoforce helps businesses reduce motor vehicle accidents, cut fleet maintenance costs and lower their insurance premiums.

- Easily tracks drivers, vehicles, remote workers and assets.
- Spots excessive idling, unauthorized vehicle use and aggressive driving in real time.
- Puts driver performance data and analysis at your fingertips with one integrated, online dashboard.
- Saves up to a gallon of fuel a day by correcting poor driving habits.

Help Create Safer Roads by Monitoring Driver Behaviors such as...

1. Speeding 2. Hard braking 3. Rapid acceleration

While the vehicle is in motion, the device records the date and time along with the three leading indicators of risk: speeding (the leading cause of motor vehicle injury and death), hard braking (a leading indicator of distracted driving), and rapid acceleration (a leading indicator of aggressive driving). The information is transmitted via cellular network to StriveSafe's online platform, providing real-time mapping and geofencing, notifications, reporting, and analytics.
